

# TEXT\_REPEAT

Version 1.0

Text\_Repeat Help

What is Text\_Repeat?

Text\_Repeat is a small program that enables sender(who has an active WhatsApp Account) to recipient(who also has an active WhatsApp Account).

It is made with Python and currently have support for Windows. Because Linux have Python Interpreter preinstalled and users can just do

```
>python TextRepeat.py
```

And I don't know how Macintosh works. So, Sorry.

## USAGE:

[Initial Screen]

TEXT\_REPEAT  
Version 1.0

Educational Tool. Don't use it for malicious purposes, ThankYou

- 1- Send Text
- 2- About/Help
- 3- Exit

Enter Your Choice:

**A) Input: 2**

- >>> This will open this text document in the notepad(default) or in other programs if you have set it up so.
- >>> If the file is not found, it will ask to move to web and fetch this documentation.

**B) Input: 1**

- >>> First program will check if you have active internet connection.
  - > If internet connection is not enabled, it will show this message:

**You are not connected to Internet. Connect to Internet.**

And revert back to the choice screen.

- > If internet connection is found, It will continue executing by showing this message:

Device connected to internet. Continuing>>>

>>> Then it will ask for which browser to use. I have included Chrome and Firefox. I have not included Edge as Edge is going to be based on Chromium, and web drivers are not stable enough.

Select browser

1-Chrome 2-Firefox: 2 (Testing with Firefox)

>>> Program will download drivers. These drivers are required for Browsers to communicate to and from the program. As an additional layer, I have included a check, because you might not want to download drivers on your current network.

We will download and run drivers for this. Do you permit?

For Chrome, it will download chromedriver and for Firefox it will download geckodriver. Both will be saved in .wdm folder in: C:\Users\<Username>\

>>> After successful installation/executing of drivers, corresponding browsers will open. First it will be fullscreen, then window will be resized to 1024 \* 600 pixels. After that it will launch

<https://web.whatsapp.com>.

>>> Program will wait until you scan given QR Code. When done, press enter in the program window.

Scan QR code and press any key to continue...

>>> Then it will ask what type of message you want to send. Blank or Text message.

Do you want to send a:

1- Blank Message, or

2- Text Message?

Enter Choice:

For Text Message, you will be provided with input to enter the text.

Enter Message:

>>> Enter number of messages you want to send. Maximum is 100.

How many times do you want message to be sent (MAX = 100)?

>>> Now enter the recipient number/name. It will perform a search. If found. It will display.

Did <recipient name> show up correctly? (y/n):

If you have not found the recipient and press n. It will show the following message

Most probably the contact is not on your contact list.

Here only y/n responses are accepted. Else, program will terminate abnormally.

>>> Now final confirmation would be asked if you want to bomb the person. Maybe a change of heart or mind.

Press Enter to Start Bombing...

Bombing will begin with a progressbar showing the progress.

Bombing: 100%|#####| 20/20  
[00:20<00:00, 1..6s/M]

>>> Now after completion, it will ask if you want to continue? Pressing any key other than 'y' will exit the program, logout of WhatsApp Web, close the browser and will go back to initial screen.

Do you want to continue(y/n)?

C) Input: 3

This will exit the program.

I have developed it so that single people like me don't have to bear the pressure of our friend's breakup and all the troubles that accompany with it.

I have a blog on NoPurposeClub: <https://nopurposeclub.wordpress.com/author/1bl4z3r>. It would be highly appreciated if you take out some time from your hectic schedule and read my articles. Thankyou.
